Glass Bead Services

We provide various bead blast services ranging in mesh sizes in order to achieve the desired look and surface profile as specified by our customer. Some of the typical applications for this process are:

Cleaning

- Cleans and prepares the surface of metal parts
- Removes existing coatings such as paint, powder coat, anodize etc. without chemical stripping

Finishing

- Blends machine marks
- Dimishes the appearance of surface blemishes and scratches
- Creates a variety of matte and bright finish appearances

Deburring

- Removes burrs on metal parts without causing damage

Adhesion

- Creates a surface finish that lends itself to better adhesion for paint and other coating processes
